#### Event

Australian Potash (APC) has released updated operating and financial parameters for its world class Lake Wells sulphate of potash (SOP) project in WA. Production has been increased from 170ktpa to 205ktpa, which in combination with higher SOP prices has offset higher opex (US\$295/t from US\$251/t) and capex (\$408m from \$292m). APC is now estimating annual EBITDA of A\$158m (from A\$124m) and a project NPV of A\$657m (from A\$398m). We had already assumed higher SOP prices and so our more conservative valuation drops from A\$305m (21cps) to A\$256m (16cps) on the higher costs and additional dilution from a larger equity raise (A\$150m, prev \$105m) to fund the increased project scope.

## **Highlights**

 APC is developing the Lake Wells Sulphate of Potash Project (LSOP) in Western Australia. APC released preliminary financial parameters on the project in April 2021 when it released the results of Front-end Engineering and Design (FEED). APC has now released optimised financial parameters incorporating increased production rates, higher capex and opex and higher assumed SOP prices. Key changes from FEED include:

- Annual production 205ktpa (prev 170ktpa).
- Capex A\$408m (prev \$292m). Approx. A\$48m of the increase is due to inflation with A\$51m due to scope changes.
- Annual average opex of US\$295/t (prev US\$251/t).
- Average annual EBITDA of A\$158m (prev A\$124m).
- Post tax NPV<sub>8</sub> A\$657m (prev \$398m).
- Our long-term realised SOP price forecast is US\$600/t. Standard NW Europe SOP prices are currently over US\$1,000/t, +100% since Jul21 (key global benchmark for SOP).
  - Potash supply remains a concern for crop producers globally, especially following the Russia/ Ukraine War. Russia and Belarus are normally responsible for 35-40% of global potash supply.
  - There is a view emerging in the industry that long run SOP prices will permanently re-rate post this spike to >US\$650/t. This is driven by increased energy costs and a switch to regionalisation from globalisation.
- The potash sector in Australia has been impacted by project execution difficulties at both Kalium Lakes (KLL) and Salt Lake Potash (SO4). Whilst investors are understandably cautious, we do not believe that APC should be tarred with the same brush.
  - We note the technical veracity of these type of solar salt projects has been proven by numerous operations globally for many decades.
  - APC has the largest JORC compliant Measured SOP Resource at 18.1Mt SOP Measured with no Inferred or Indicated Resource.
  - Lake Wells' 30-year mine life uses only ~23% of the Measured Resource.
  - APC use brine borefield abstraction i.e. less technical risks compared to salt lake trenching (most peers).
  - An EPC (Engineering, Procurement and Construction) contracting style is used for more than 75% of the construction contracts by value, which ensures cost, schedule and performance guarantees.
- We note recent news that Czech private equity group Sev.en has acquired SO4 from administration and intends to restart the project.

#### Recommendation

We have revised our financial model to reflect the increased production and higher costs. We maintain our BUY recommendation but reduce our price target to A\$0.16ps from A\$0.21ps. Our view is backed by excellent commodity fundamentals, solid Lake Wells financials, a high-quality resource, and a risk averse approach from management.

APC is preparing for start-up of its flagship 100%-owned Lake Wells Sulphate of Potash Project (LSOP) in Western Australia. The project is based on a 30-year mine life producing 205ktpa premium Sulphate of Potash (SOP). With full environmental approval, 90% of offtake secured, \$140m Northern Australia Infrastructure Facility (NAIF) funding approved and \$45m funding from Export Finance Australia, LSOP appears to be progressing and derisking. We assume

a full production ramp-up in CY25. Price to earnings (x) - NTM 3,500 -3,000 -2,500 -1,500 -1,500 -1,000 -

Shawand Partners Financial Services

# Australian Potash - core drivers and key catalysts

- APC holds a 100% interest in the LSOP project, located approximately 500kms northeast of Kalgoorlie, in Western Australia's Eastern Goldfields. The LSOP project is a brine, solar salt project; the brine contains the potassium and sulphate bearing minerals from which SOP is refined.
- The LSOP project is NPV positive at realised SOP prices of US\$380/t. Using our base case realised SOP price deck of US\$600/t (2022 Real) the project has a post-tax NPV<sub>10</sub> of \$256m and IRR of 19%. Key components of our model include
  - 205ktpa SOP operation over 35 years.
  - Total capital expenditure of A\$292m and competitive capital intensity of A\$1,975/t.
  - Opex of US\$295/t over LOM, which is first quartile.
- The LSOP project is progressing and derisking. APC has announced: (1) Full environmental approval. (2) 90% of offtake secured. (3) \$140m Northern Australia Infrastructure Facility (NAIF) funding approved and \$45m funding from Export Finance Australia. Early site works are continuing. We assume a Final Investment Decision in CY22, and a full production ramp-up in CY25.
- We are positive Sulphate of Potash (SOP) markets.
  - SOP is a **premium** type of potassium carrying fertiliser with no substitutes.
  - Demand Arable land per capita is reducing over time, and industry consensus SOP demand forecasts are for mid-single digit growth over the coming decades.
  - Supply Mannheim Process capacity makes up ~60% of global SOP production and is the globe's marginal SOP supplier (marginal FOB costs >US\$500/t). The Mannheim Process is a sulphuric acid consuming and energy intensive industrial process to convert lower quality MOP to SOP.
  - Price our long-term realised price forecast is US\$600/t. NW Europe SOP prices are currently over US\$1,000/t, +110% since July (key global benchmark for standard SOP).
    - Potash supply remains a concern for crop producers globally, especially following the Russia/ Ukraine War. This is having a direct impact on 35-40% of global potash supply (Russia / Belarus production).
    - There is a view emerging in the industry that long run SOP prices will permanently re-rate post this spike, driven by a permanent increase in MOP prices (mine maturation and the switch to regionalisation from globalisation) and increased energy costs. Commentary from some experts is suggesting long-run standard SOP prices to be >US\$650/t, which is indicative that our price deck is conservative.

## Figure 2: Europe SOP prices (US\$/t), trading above US\$1,000/t

Source: Argus, APC, Shaw and Partners analysis

#### Figure 1: Location of the Lake Wells Project

Source: Company reports

- A premium product and asset strategically located. APC intends to produce a premium quality SOP from brine production (i.e. no Mannheim Process) in Australia. Australia is proximate to emerging Asian markets, which are driving the globe's mid-single digit SOP growth. The company expects realised product prices to include a ~10% product quality premium for (1) the product being 'green' (i.e. organic / non-Mannheim Process), (2) granular (as opposed to powdered), and (3) higher K<sub>2</sub>O content than standard SOP (usually on a pro rata basis above standard SOP K<sub>2</sub>O content of 50%). Offtakes have been structured to pass through this price premium.
- Both Kalium Lakes and Salt Lake Potash have encountered difficulties with brine abstraction, production of harvest salts, and project execution.
  - We note the technical veracity of these type of solar salt projects has been proven by numerous operations globally for many decades.
- In our view Lake Wells is backed by a higher quality resource than its Australian peers (KLL/ SO4).
  - APC has the largest JORC compliant Measured SOP Resource across its peer space; 18.1Mt SOP Measured with no Inferred or Indicated Resource.
  - Lake Wells' 30-year mine life uses ~23% of the Measured Resource.
  - Lake Wells is a borefield development into a palaeochannel.
  - Borefield developments supply process water for the majority of mine sites in Western Australia.
  - We believe APC's approach for a Lake Wells development is conservative given:
    - APC is factoring in two summers of pond evaporation prior to commissioning. This
      is to ensure there is a sufficient quantum and quality of harvest salts to feed to
      the process plant.
    - There is a higher quality of the resource all in Measured category. APC has the largest Measured SOP Resource of Aussie listed names at 18Mt, which we believe implies lower technical risks.
    - Brine borefield abstraction is used, which we believe carries less technical risks compared to salt lake trenching (most of its peers).
    - An EPC (Engineering, Procurement and Construction) contracting style is used for more than 75% of the construction contracts by value, which ensures cost, schedule and performance guarantees.
- Other exploration assets close to Lake Wells appear interesting. APC also holds significant tenement positions at the Lake Wells Gold Project and Laverton Downs nickel sulphide project.

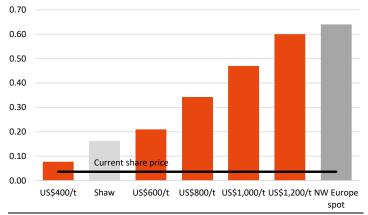

## Figure 3: APC valuation (fully diluted)

Australian Potash Valuation - diluted	A\$m	A\$ps
Lake Wells	256	0.12
Pro forma net debt	13	0.01
Cash from options & equity raise	118	0.05

N.B. Assumes an A\$150m equity raise at A\$0.08ps to fund the project.

# Key Changes from April 2021 FEED

Since APC released its FEED for the project in April 2021 there have been three major changes for the project:

- 1. SOP prices have soared post the Russian invasion of Ukraine,
- 2. Inflation has increased capex and opex estimates, and
- 3. Production test results have confirmed high productivity of the Lake Wells bores which has resulted in an increase in the project's production estimates.

APC has incorporated those changes into an optimised development for the project resulting in a 65% increase in the project's pre-tax NPV to A\$1,014m.

Financial metric	Unit	FEED Value	Optimised development	Change
Annual production	ktpa	170	205	+21%
Number of bores (life of mine)	#	172	89	-48%
Project NPV <sub>8</sub> (pre-tax, nominal)	A\$m	614	1,014	+65%
IRR (pre-tax)	%	21	22	+5%
CAPEX (including contingency)	A\$m	292	408	+39%
OPEX	US\$/t	251	295	+17%
Annual average EBITDA	A\$m	124	158	+27%
Annual average free cash flow (pre-tax)	A\$m	119	155	+30%
Operational payback period	years	4.5	4.3	-4%
Development schedule (post FID)	months	36	36	-0%

# Figure 5: Key changes from FEED (Apr 2021) to optimized development (Sep 2022)

Source: APC ASX release Sep 2022

We have incorporated the changes into our financial modelling, and we have also used the opportunity to incorporate a longer ramp-up period into our forecasts. This has resulted in earnings downgrades in FY24 and FY25 due to lower production.

Our valuation also reduces from 21cps to 18cps as we factor in the higher costs. We had already assumed higher SOP prices so unlike APC's forecasts, our higher cost assumptions are not offset by higher prices.

# Key risks

As a small mining company broadly exposed to a single commodity and a single asset we consider an investment in Australian Potash to be high risk. The key risks include;

- Potash markets are opaque and difficult to forecast. The actual SOP price may differ substantially from our forecasts.
- Several secondary approvals are required before pre-mining operations can begin, and there is no guarantee that these may be obtained in a timely manner.
- Operations for APC have not yet started and there is a risk that they may be unable to bring the LSOP to production. The project may cost more than expected and may not operate as expected.
- APC will need to recapitalise to fund the commencement of operations. There is a risk that capital markets are not willing to fund the project.
- Forecasting future operating costs has considerable uncertainty. Our forecasts may
  prove to be too optimistic. If each company's costs are higher than we expect then our
  cash flow forecasts will be too high.
- Smaller companies carry more significant 'key personnel' risk than larger organisations. If senior management depart APC it could delay projects or exacerbate operational risks.
- Safe and reliable production from operations once projects are operational. The
  inability to maintain safe and reliable operations may result in a sustained, unplanned
  interruption to production and impact the company's licence to operate and financial
  performance. Production facilities are subject to operating hazards associated with
  major accident events, cyber-attack, inclement weather and disruption to supply
  chain, that may result in a loss of uranium (radioactive material) containment, harm to
  personnel, environmental damage, diminished production, additional costs, and
  impacts to reputation or brand.

# **Rating Classification**

Buy	Expected to outperform the overall market
Hold	Expected to perform in line with the overall market
Sell	Expected to underperform the overall market
Not Rated	Shaw has issued a factual note on the company but does not have a recommendation

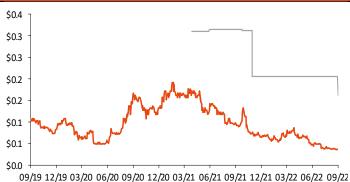

# **Risk Rating**

High	Higher risk than the overall market – investors should be aware this stock may be speculative
Medium	Risk broadly in line with the overall market
Low	Lower risk than the overall market

**RISK STATEMENT:** Where a company is designated as 'High' risk, this means that the analyst has determined that the risk profile for this company is significantly higher than for the market as a whole, and so may not suit all investors. Clients should make an assessment as to whether this stock and its potential price volatility is compatible with their financial objectives. Clients should discuss this stock with their Shaw adviser before making any investment decision.

# Disclaimer

Shaw and Partners Limited ABN 24 003 221 583 ("Shaw") is a Participant of ASX Limited, Cboe Australia Pty Limited and holder of Australian Financial Services Licence number 236048.

**ANALYST CERTIFICATION**: The Research Analyst who prepared this report hereby certifies that the views expressed in this document accurately reflect the analyst's personal views about the Company and its financial products. Neither Shaw nor its Research Analysts received any direct financial or non-financial benefits from the company for the production of this document. However, Shaw Research Analysts may receive assistance from the company in preparing their research which can include attending site visits and/or meetings hosted by the company. In some instances the costs of such site visits or meetings may be met in part or in whole by the company if Shaw considers it is reasonable given the specific circumstances relating to the site visit or meeting. As at the date of this report, the Research Analyst does not hold, either directly or through a controlled entity, securities in the Company that is the subject of this report, or where they do hold securities those interests are not material. Shaw restricts Research Analysts from trading in securities outside of the ASX/S&P100 for which they write research. Other Shaw employees may hold interests in the company, but none of those interests are material.

DISCLAIMER: This report is published by Shaw to its clients by way of general, as opposed to personal, advice. This means it has been prepared for multiple distribution without consideration of your investment objectives, financial situation and needs ("Personal Circumstances"). Accordingly, the advice given is not a recommendation that a particular course of action is suitable for you and the advice is therefore not to be acted on as investment advice. You must assess whether or not the advice is appropriate for your Personal Circumstances before making any investment decisions. You can either make this assessment yourself, or if you require a personal recommendation, you can seek the assistance of your Shaw client adviser. This report is provided to you on the condition that it not be copied, either in whole or in part, distributed to or disclosed to any other person. If you are not the intended recipient, you should destroy the report and advise Shaw that you have done so. This report is published by Shaw in good faith based on the facts known to it at the time of its preparation and does not purport to contain all relevant information with respect to the financial products to which it relates. The research report is current as at the date of publication until it is replaced, updated or withdrawn. Although the report is based on information obtained from sources believed to be reliable, Shaw does not make any representation or warranty that it is accurate, complete or up to date and Shaw accepts no obligation to correct or update the information or opinions in it. If you rely on this report, you do so at your own risk. Any projections are indicative estimates only and may not be realised in the future. Such projections are contingent on matters outside the control of Shaw (including but not limited to market volatility, economic conditions and company-specific fundamentals) and therefore may not be realised in the future. Past performance is not a reliable indicator of future performance. Except to the extent that liability under any law cannot be excluded, Shaw disclaims liability for all loss or damage arising as a result of any opinion, advice, recommendation, representation or information expressly or impliedly published in or in relation to this report notwithstanding any error or omission including negligence.

Depending on the timing and size of your investment, your portfolio composition may differ to the model. Performance figures are derived from the inception date of the model and its investment transactions from that date, therefore the performance for your portfolio may be different. If you have any questions in connection with differences between your portfolio and the model, you should speak with your adviser.

**IMPORTANT INFORMATION TO CONSIDER**: It is important that before making a decision to invest in a Shaw Managed Accounts, a managed fund, an exchange traded fund, an individual hybrid security or listed debt instrument that you read the relevant Product Disclosure Statement ("PDS"). The PDS will contain information relevant to the specific product, including the returns, features, benefits and risks. The PDS can be found at: www.shawandpartners.com.au/media/1348/shawmanagedaccounts\_pds.pdf.

**RISKS ASSOCIATED WITH HYBRID SECURITIES**: Hybrid securities and listed debt instruments differ from investments in equities and cash products in a number of important respects. The liquidity risk associated with an investment in hybrid securities and listed debt instruments will generally be greater than that associated with equities. The credit risk associated with hybrid securities and listed debt instruments is higher than that of a cash product or term deposit. Some hybrid securities may be perpetual in nature, meaning that they can only be redeemed or exchanged for cash or equity at the issuer's option. Hybrids may also contain terms which automatically trigger the deferral of an interest payment or cause the issuer to repay the hybrid earlier or later than anticipated. ASIC has published information to assist consumers in understanding the risks and benefits associated with an investment in hybrid securities or listed debt instruments. This information can be found under the heading 'Complex Investments' at <u>www.moneysmart.gov.au/investing</u>.

**DISCLOSURE**: Shaw will charge commission in relation to client transactions in financial products and Shaw client advisers will receive a share of that commission. Shaw, its authorised representatives, its associates and their respective officers and employees may have earned previously or may in the future earn fees and commission from dealing in the Company's financial products.

Shaw acted for the company in a corporate capacity within the past 12 months for which it received a fee. Accordingly, Shaw may have a conflict of interest which investors should consider before making an investment decision.
