Projects:

Lake Wells: gold, nickel, base metals, PGE, uranium

Laverton Downs: gold, base metals

Gambier Lass: gold, base metals

Kilkenny: gold, base metals

Iguana: gold, base metals

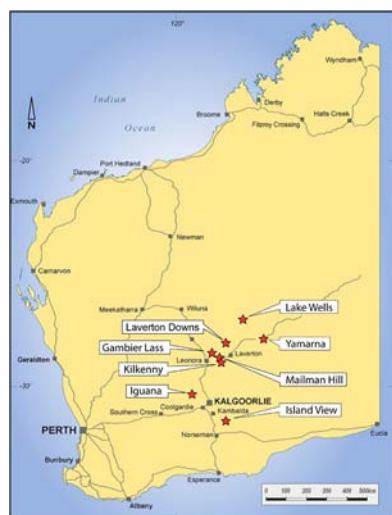

Yamarna: gold, PGE, uranium

Mailman Hill: gold, base metals

ACTIVITIES REPORT - FOR THE QUARTER ENDING 30 SEPTEMBER 2013

SUMMARY and HIGHLIGHTS

- New encouraging calcrete and soil geochemistry gold anomalies advance gold target area at Lake Wells EAST Area, Lake Wells Project
- Latest soil and rockchip geochemistry sampling increases zinc-copper anomalous trend to a length of 1200 metres with elevated geochemistry values of **132 ppm copper** and **165 ppm zinc** at the Venus Prospect, Mailman Hill Project
- Orientation soil sampling returns elevated gold-in-soil values up to **28 ppb gold** on dislocated 2000 metre long, +10 ppb gold previous explorers' soil anomaly in central part of Mailman Hill Project
- Reconnaissance geochemistry sampling returned elevated gold values on Gambier Lass Project
- Reconnaissance geochemistry sampling returned elevated zinc-copper values up to **781 ppm zinc** and **94 ppm copper** on Laverton Downs Project
- Elevated gold, arsenic, nickel and zinc geochemistry soil values recorded at Island View Project
- Capital Raising announced to fund exploration activities

"A new company targeting overlooked and underexplored greenstone belts in the Eastern Goldfields of Western Australia"

EXPLORATION PLANNED FOR DECEMBER 2013 QUARTER

- RAB/AC drill programs at Gambier Lass, Mailman Hill and Laverton Downs projects planned for December 2013 quarter following receipt of PoW-E approvals
- Followup geochemistry program planned on Lake Wells EAST Area to further define anomalous gold trends
- Followup soil geochemistry planned to define the extent of both gold and base metal anomalous zones at Mailman Hill

GOLDPHYRE
RESOURCES LIMITED

EXPLORATION ACTIVITIES

LAKE WELLS PROJECT – 100% Goldphyre Resources Limited

Exploration during the September 2013 quarter included a geochemistry sampling program (Figure 1) on the Lake Wells EAST Area, located 160 kilometres north of Laverton.

A reconnaissance east-west orientated, fine fraction soil sampling line on the sand plain dominant terrain at the Lake Wells EAST Area was completed. Two anomalous calcrete samples (9 and 16 ppb Au) in conjunction with elevated fine-fraction soil sample results up to 4 ppb gold (Figure 1) are considered encouraging in this aeolian environment (wind transported material).

The results were supported by recent previous explorers' data acquisition showing historic end-of-hole gold anomalism¹ to the south of the project area, coupled with the reported success of adjacent tenement holder Gold Road Resources Ltd's geophysical (SAM) survey targeting last month (GOR ASX Announcement 14th August 2013).

Regional, wide spaced AC drilling carried out by the Company during 2012 to the north of the current soil sampling recorded elevated gold (30 ppb), platinum (15 ppb) and palladium (10 ppb) results and interpretation of magnetics has highlighted a large, north trending, priority gold-PGE target with no historic drill testing evident (ASX Announcement 29th June 2012). Reconnaissance AC drilling is planned upon the completion of followup soil geochemistry sampling.

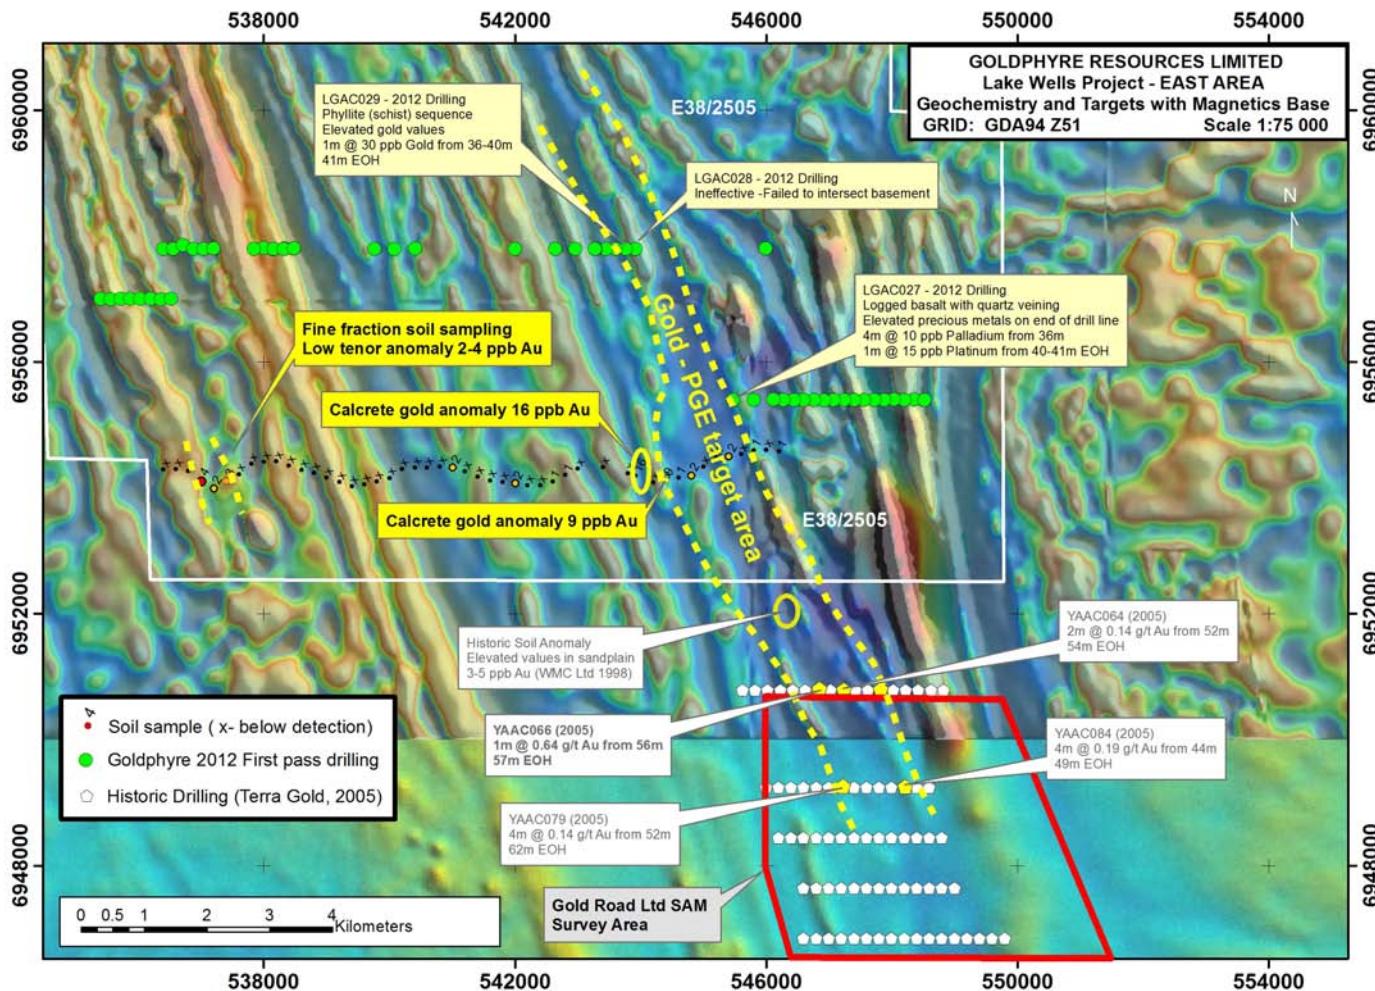

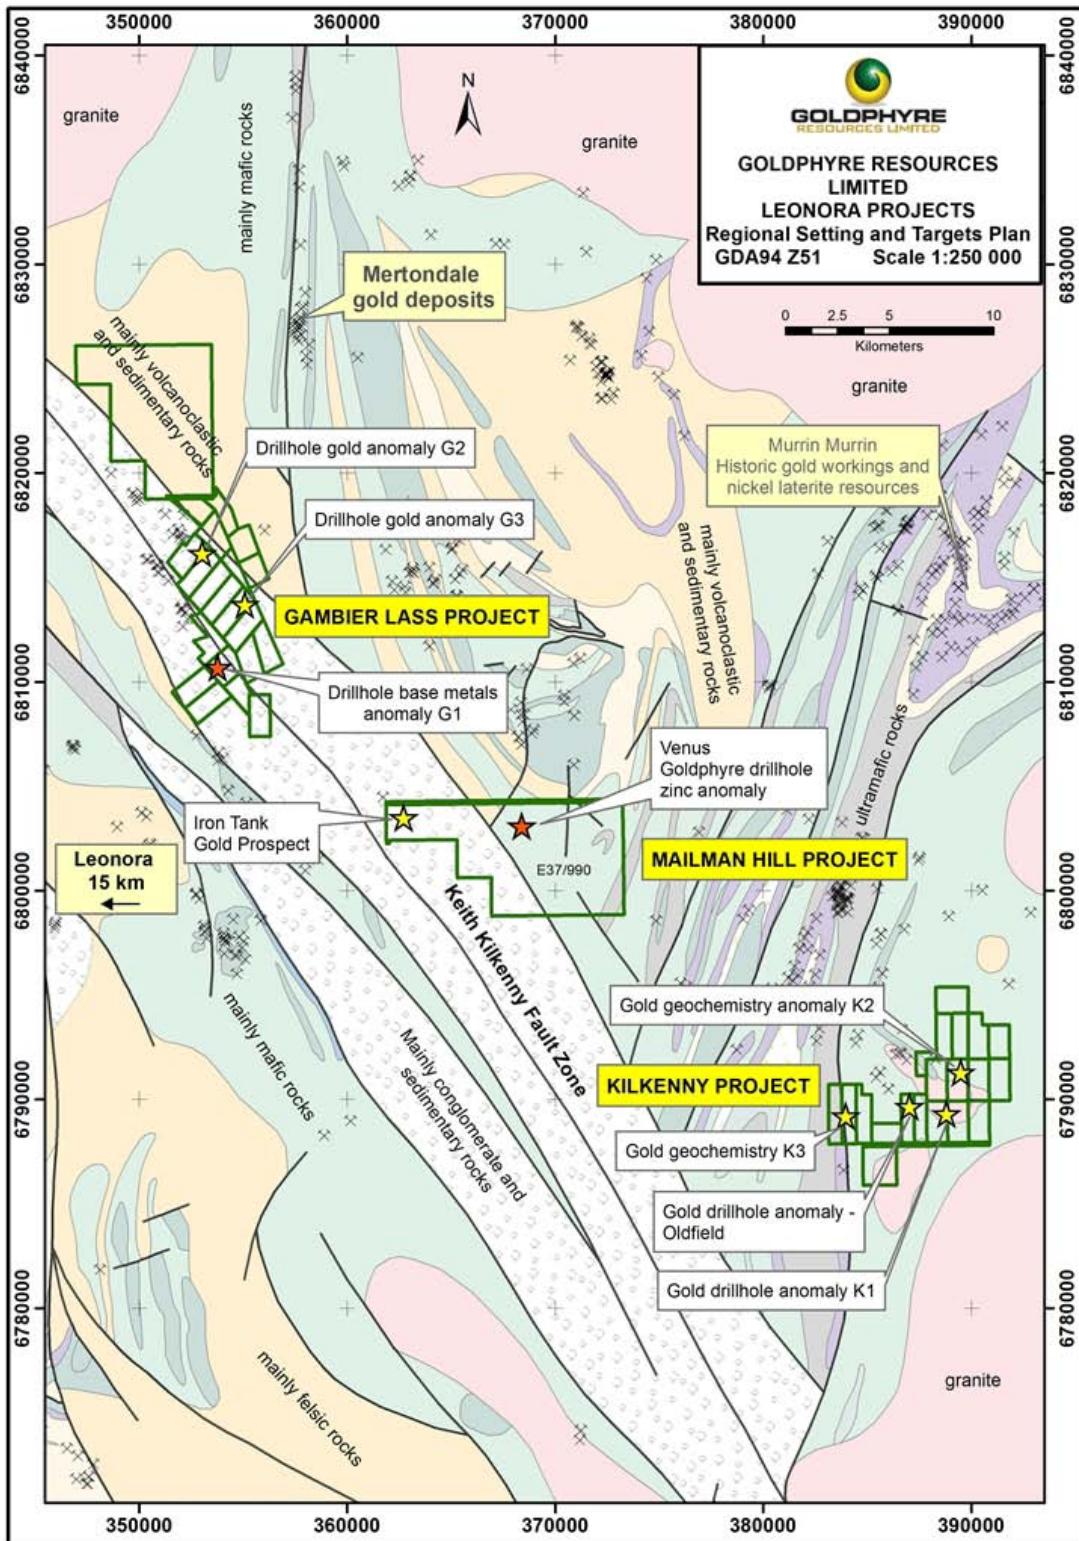

Figure 1. Lake Wells EAST Area (E38/2505) Soil Geochemistry and Targets with TMI Magnetics basemap showing elevated gold, PGE, copper and zinc values from 2012 drilling.

MAILMAN HILL PROJECT – 100% Goldphyre Resources Limited

Four local orientation soil sampling lines (39 soil samples on approximate 50-100 metre centres) were completed at the Venus Prospect and Central Area at the Mailman Hill Project (Figure 2-4, Appendix 1). Only background gold values were recorded, however, several samples returned anomalous copper and zinc values (maximum 165 ppm Zn, 132 ppm Cu).

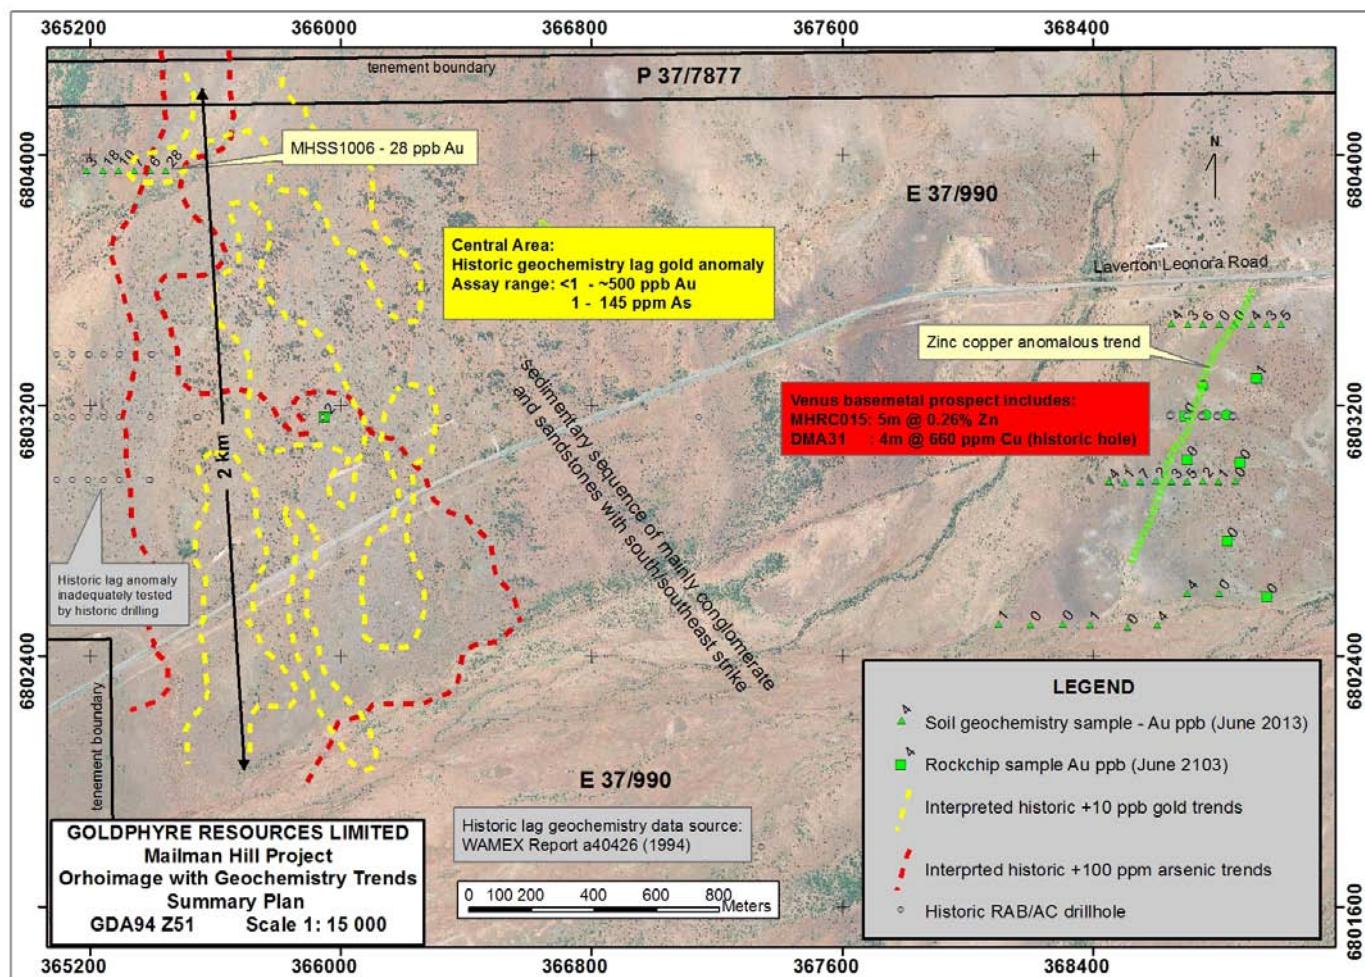

Figure 2. Leonora Region Projects plan

This orientation sampling at the Venus Prospect was successful in increasing the magnitude of the zinc-copper geochemistry anomaly (which remains open to the north and south) to 1,200 metres long (Figure 3).

A localised orientation soil sampling line (6 samples, 100 metre centres, Figure 3) was also completed in the central area of Mailman Hill and returned background gold values to the west of a 28 ppb Au high sample reported in July, 2013. This sampling tested the northern portion of a previous explorers' gold-arsenic lag geochemistry anomalies².

Figure 3. Mailman Hill Geochemistry Trends Plan

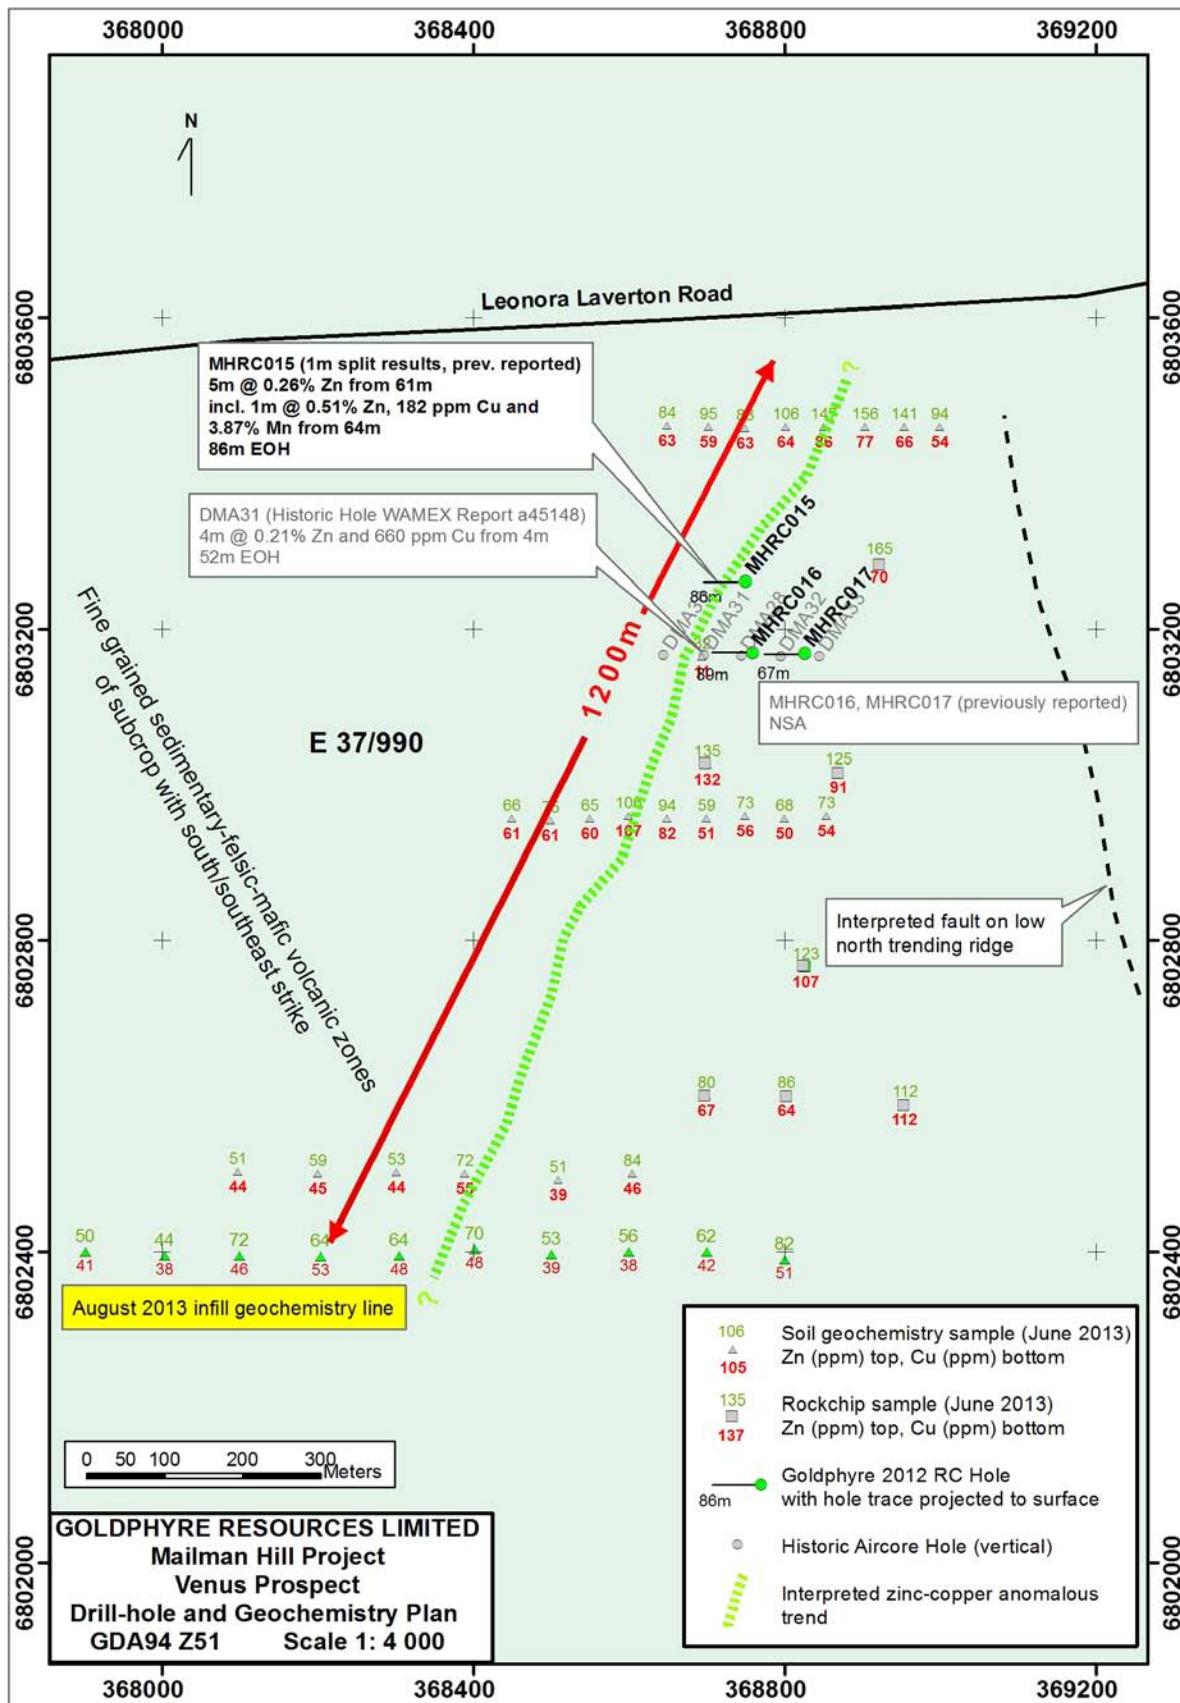

Further infill geochemistry is recommended to more accurately define gold/base metal potential and historic anomalism prior to any reconnaissance drill testing.

GOLDPHYRE
RESOURCES LIMITED

GAMBIER LASS PROJECT – 100% Goldphyre Resources Limited

The Gambier Lass Project is located 15 kilometres northeast of Leonora (Figure 5). Historic gold mines are located adjacent to the Gambier Lass Project and the rocktypes (as mapped by the GSWA) are considered similar to the host rocktypes at the Teutonic Bore, Jaguar and Bentley base-metal deposits located to the north of the Gambier Lass project.

Recent fieldwork included a focused soil geochemistry program (42 soil samples, Figure 5-6, Appendix 1) over the G1 basemetals target (a target generated by high copper and zinc Rotary Air Blast (RAB) drill assay results from a historic exploration report³). The copper and zinc geochemistry results over the G1 (Figure 6) were inconclusive and a small RAB drill program is proposed to adequately test the G1 target.

An elevated geochemistry gold value of 17 ppb was recorded at the G1 target in this soil sampling program.

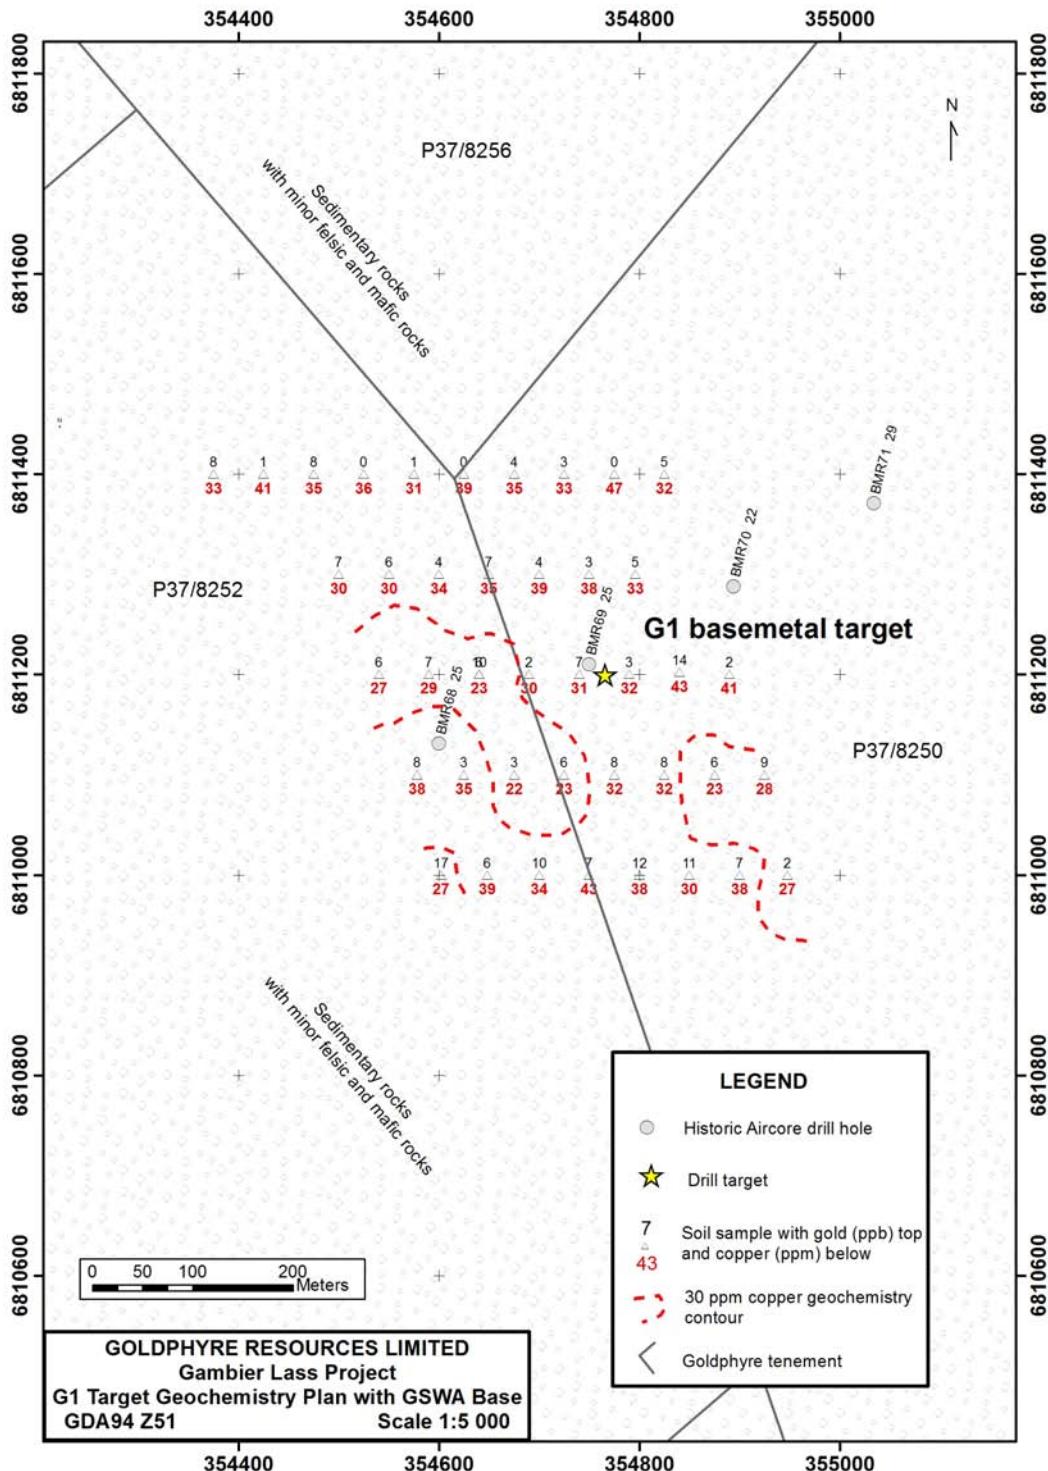

Figure 5. Gambier Lass Geochemistry Summary Plan

GOLDPHYRE
RESOURCES LIMITED

Figure 6. Gambier Lass G1 Target Geochemistry Plan

Infill geochemistry (15 samples, Figure 5) was completed over the western margin of Gambier Lass with previously reported elevated gold (13 ppb) and copper (62 ppm) soil geochemistry values. The infill sampling failed to repeat the elevated gold value but confirmed the subtle, elevated copper value with a maximum of 57 ppm Cu.

GOLDPHYRE
RESOURCES LIMITED

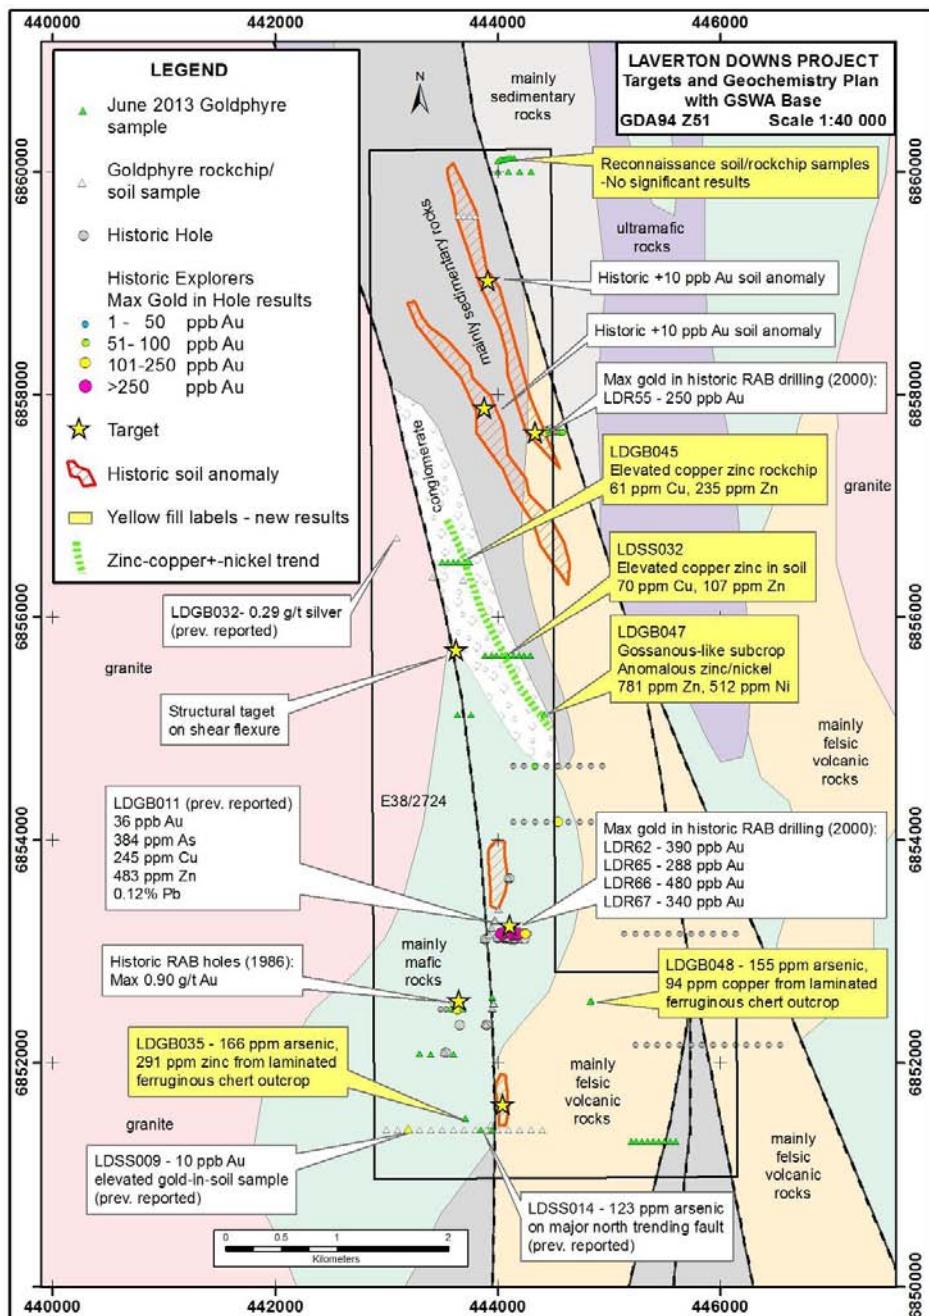

LAVERTON DOWNS PROJECT – 100% Goldphyre Resources Limited

The Laverton Downs Project (E38/2724), located 15 kilometres north of Laverton, is considered to be a prospective gold/base metals property with historic drillhole gold anomalies and recent encouraging basemetals rockchip anomalous (Goldphyre ASX Release dated 17th May, 2013).

Further elevated and anomalous copper, zinc, arsenic and nickel results (35 soil samples, 15 rockchip samples, Figure 7, Appendix 1) were received from work completed in the September 2013 quarter.

These results included maximum values of 166 ppm As, 94 ppm Cu, 781 ppm Zn and 512 ppm Ni. The latter two results were recorded from the same rockchip sample (LDGB047) collected from a gossanous-like subcrop on the eastern margin of the tenement. Another rockchip sample (LDGB048), returned elevated copper (94 ppm Cu) and anomalous arsenic (155 ppm As) from a ferruginous, laminated chert subcrop in the south of the tenement.

Figure 7. Laverton Downs Reconnaissance Results and Targets Plan

GOLDPHYRE
RESOURCES LIMITED

No significant gold results were recorded, however rockchip sample LDGB035 returned anomalous arsenic and zinc (167 ppm As and 291 ppm Zn). LDGB035 was collected from a laminated ferruginous chert outcrop located some 200 northwest of the arsenic anomalous soil sample (LDSS014).

Sampling of remnant drill chips from the vicinity of the 640 ppm Cu anomaly returned only background basemetals values. One drillhole sample from historic RAB drilling (LDGB041: oxidised quartz veined sedimentary rock) recorded 0.48 g/t.

Elevated copper and zinc (LDSS032 – 70 ppm Cu, 107 ppm Zn) were reported from an E-W soil sampling orientation line in the central section of E38/2724. Historic auger sampling in this area returned a maximum copper result of 125 ppm and remains to be drill tested. The recent Goldphyre soil sampling supports this historic auger basemetals geochemistry anomalous.

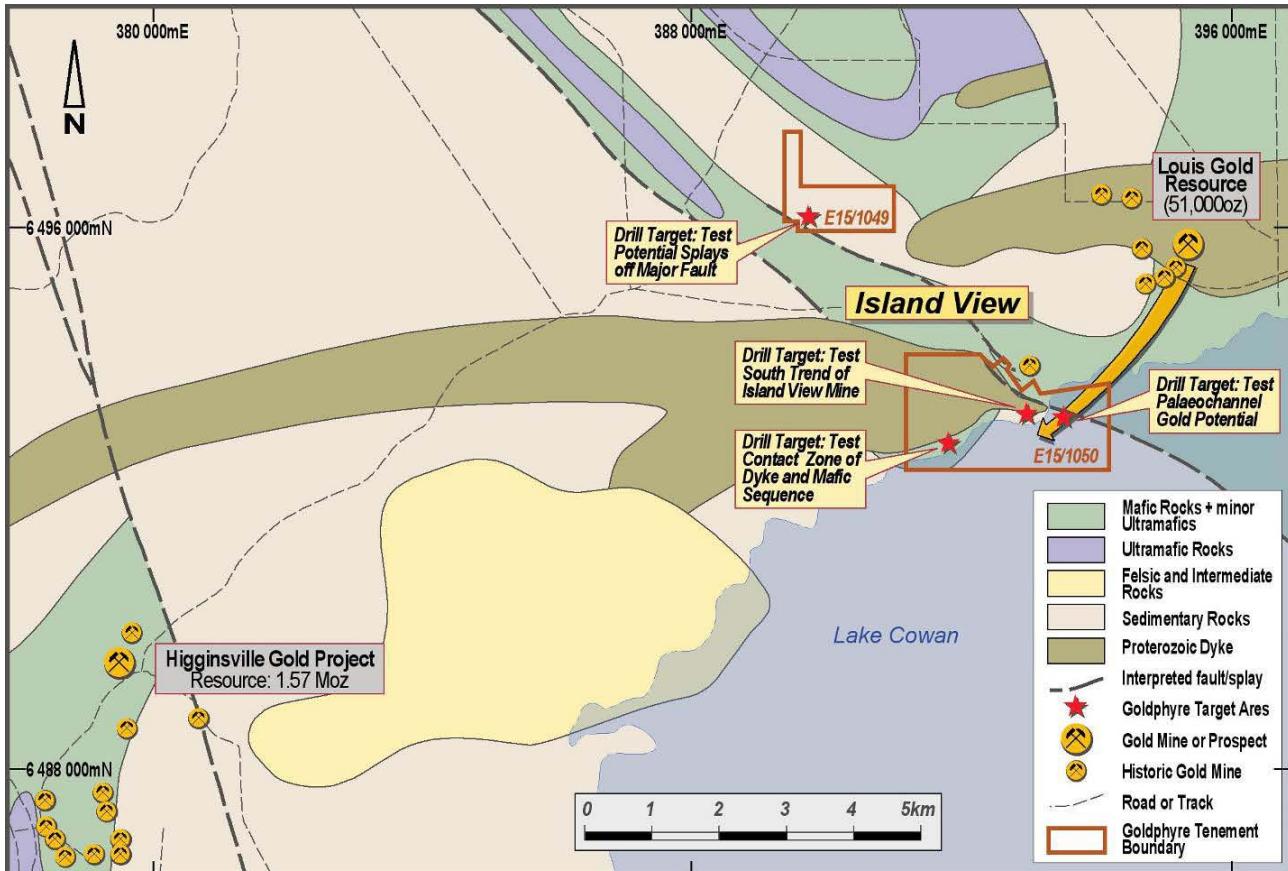

RAB drilling is planned to test historic gold drill holes anomalies and recent basemetals geochemistry anomalies in the December 2013 Quarter.

ISLAND VIEW PROJECT – 100% Goldphyre Resources Limited

A reconnaissance soil sampling and rockchip line (12 soil samples on 100 metre-200 metre centres and 4 rockchip samples) was completed on the western part of the Island View Project, located 90 kilometres south of Kalgoorlie.

The Island View Project (Figure 8) is proximal to several gold deposits and mineralisation styles - the Higginsville high-grade gold operation is located approximately 12 km to the west of Island View and approximately 2 km to the east of E15/1050, a series of palaeochannel gold deposits have been mined (Louis-Brigette-Sophia deposits⁴).

Figure 8. Island View Project Geology and Targets plan

⁴Vinar, J, 2001. Lake Cowan Resource Report Estimates for the Louis and Sophia Brigitte Deposits and DATAMINE Model Documentation. South Kal Mines Pty. Ltd.

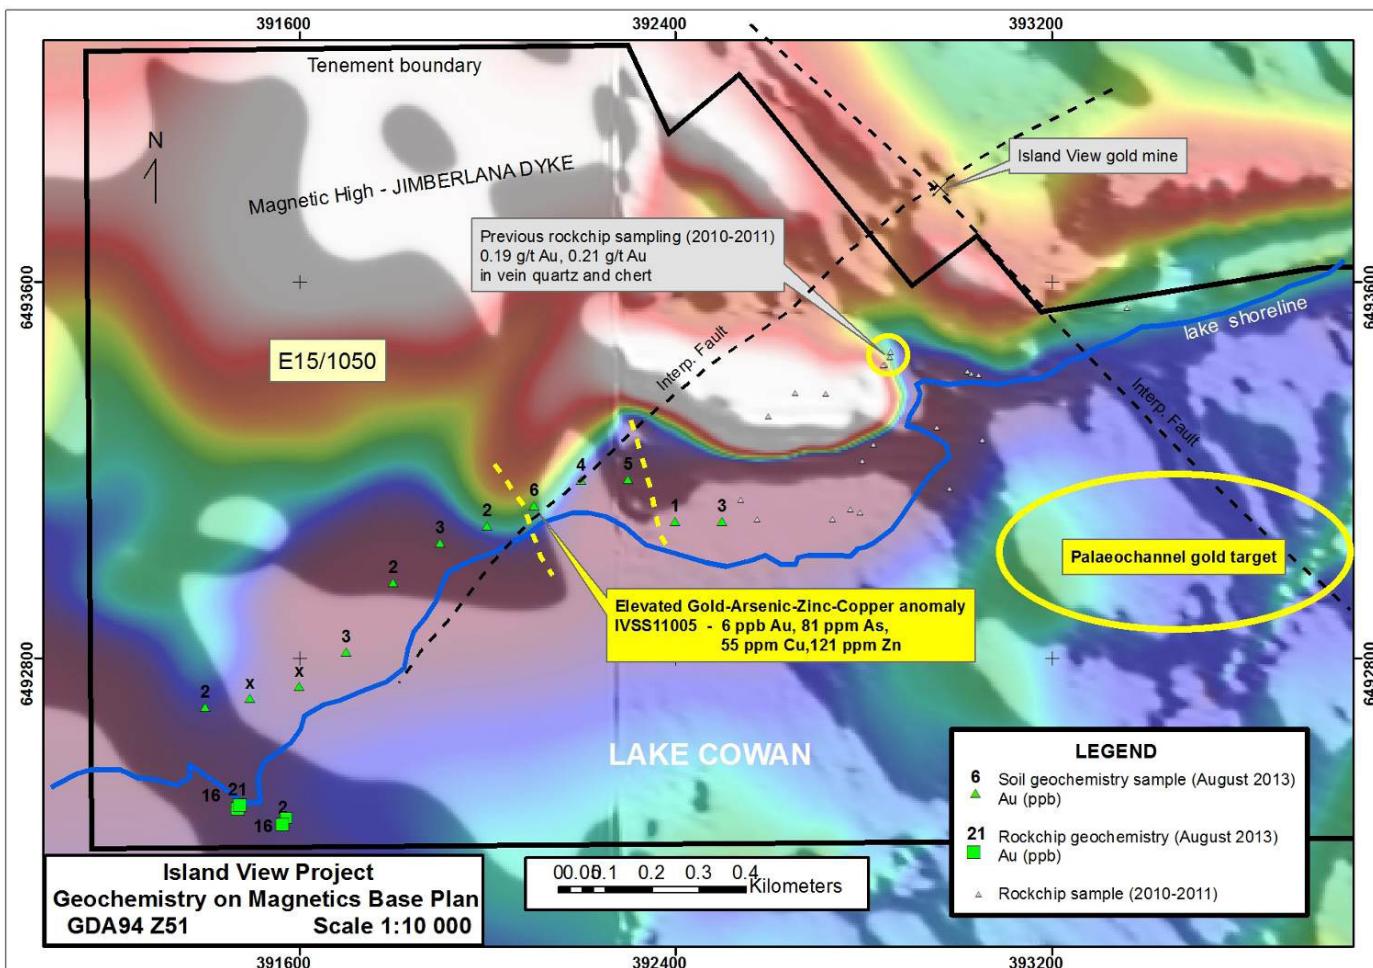

GOLDPHYRE
RESOURCES LIMITED

One of the reconnaissance soil samples recorded anomalous arsenic, zinc, copper and elevated gold (IVSS11005 – 6 ppb Au, 81 ppm As, 56 ppm Cu, 139 ppm Ni and 121 ppm Zn, Figure 9). This anomalousness is encouraging in conjunction with previous gold anomalous rockchip geochemistry and palaeochannel gold potential.

Further infill geochemistry is required to more accurately define gold/base metal potential in the anomalous areas prior to reconnaissance drill testing.

Figure 9. Island View Project Magnetics and Geochemistry plan

YAMARNA PROJECT

E38/1949 – 100% Goldphyre Resources Limited

Office-based remote sensing studies and targeting strategy work has been completed and the Company remains in ongoing negotiations with the Yilka claimant group for the purposes of meeting Heritage clearance obligations for exploration access to the project area.

KILKENNY PROJECT – 100% Goldphyre Resources Limited

No fieldwork was completed on the Kilkenny Project in the reporting period.

Further fieldwork will include soil/geochemistry sampling over previous explorers' gold-in-soil anomalies (including a +150 ppb soil spot value⁵) following the grant of all the project tenements.

TENEMENTS

Voluntary partial surrenders were completed on Lake Wells Project tenements E38/2113 (11 graticular blocks) and E38/2505 (9 graticular blocks).

Tenements granted in the September 2013 quarter:

PROJECT	TENEMENT
Gambier Lass	P37/8330, P37/8336, P37/8337
Iguana	E16/447

CAPITAL RAISING

During the September 2013 quarter, the Company announced a capital raising to fund ongoing exploration. The funds are being raised via a share placement to sophisticated and professional investors in two tranches. Tranche 1 has been completed and the shares to be issued under Tranche 2 will be considered by shareholders at the Company's General Meeting, being held on 31st October, 2013.

FURTHER WORK PLANNED

RAB/AC drilling is planned to test gold and base metal targets at Gambier Lass, Mailman Hill and Laverton Downs following the approvals of all PoW-E for these project areas.

Followup geochemistry sampling is planned on Lake Wells EAST Area to further define anomalous gold trends.

Most of the tenements of the Kilkenny Project are prospecting licence applications and followup geochemistry and rockchip sampling is planned once these tenements are granted.

Other basemetals and gold targets identified on current Goldphyre project areas will be reviewed and prospectivity ranked for appropriate field exploration (including but not limited to, geochemistry, geophysics and reconnaissance drilling).

COMPETENT PERSONS STATEMENT

The information in this report that relates to Exploration results, Mineral Resources or Ore Reserves is based on information compiled by Mr Brenton Siggs who is a member of the Australasian Institute of Geoscientists. Mr Siggs is contracted to the company through Reefus Geology Services and is a Non-Executive Director (Exploration Manager) of Goldphyre Resources Limited. Mr Siggs has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity currently being undertaken to qualify as a Competent Person as defined in the 2004 edition of the Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Siggs consents to the inclusion in this report of this information in the form and context in which it appears.

FORWARD LOOKING STATEMENT DISCLAIMER

This announcement contains forward-looking statements which involve a number of risks and uncertainties. These forward looking statements are expressed in good faith and believed to have a reasonable basis. These statements reflect current expectations, intentions or strategies regarding the future and assumptions based on currently available information. Should one or more of the risks or uncertainties materialise, or should underlying assumptions prove incorrect, actual results may vary from the expectations, intentions and strategies described in this announcement. No obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

Datum: GDA94 Zone 51 Co-ordinate system with sample pickup by hand-held GPS Garmin 60.

Note: Rockchips 2-3 kg sample weight collected by geology pick/trowel from 10m² surface area.

Soil samples 2-3kg sample weight collected by trowel/spade from soil material overlying calcrete or saprolite horizon (except LWSS samples), nominal hole depth range 0.05-0.4m.

Samples with prefix LWSS sieved at MinAnalytical Lab, Perth to -180 micron mesh size to assay fine fraction component of transported sand material collected.

All samples delivered to MinAnalytical Lab, Perth for 25g Aqua Regia Assay Digest for gold (AR25MS) and AR2510 ICP-MS (multilement assay suite). (Detection Limit – Au – 1 ppb, Au with x value= below detection limit. NA= Element not assayed. Detection Limits as follows:- Cu : 1ppm, Pb : 2ppm, Zn : 2ppm, Ni : 1ppm, As : 2 ppm, Ag: 0.05 ppm, Ag values less than detection assigned 0.02 value for GIS data transfer format)
